

... simply better protection!

Intercept Technology Australasia® is pleased to announce Intercept Australia® to the ITG (Intercept Technology Group)

Benefit from the network and knowledge of the INTERCEPT Technology™ Group

What does Intercept Australia® bring to industry across Australia and surrounding areas?

- A global information platform to provide information of the functionality and application of INTERCEPT Technology™ products as well as providing the best possible technical advice in the field of corrosion protection for the client.
- Access to information exchange and the support to customers in global challenges. With our extraordinary local know-how and a high technical qualification we are able to provide our customers with the best possible advice.
- The network of participant partners spreads across the globe and is epitomized by short, fast and focused communication. When you have specific requirements within a particular region and/or an industry, we can provide you with the right specialist and local know-how for your industry.
- The aim of Intercept Australia® and the ITG is to provide the best corrosion protection for goods depending on the true local environmental impact. By working together with independent universities, laboratories and companies, we collectively hold a substantial library of factual data which we use for the applications and evaluations.

Germany

INTERCEPT Technology™ at FachPack 25 September 2012

INTERCEPT Technology™ exhibits at one of the largest packaging trade fairs in Europe - FachPack in Nürnberg. INTERCEPT® products, solutions and innovations were explained by our application specialists. Worth mentioning are the new Korrvu® INTERCEPT™ packaging and the INTERCEPT™ PP thermoformed liners.

INTERCEPT Technology™, in partnership with Sealed Air, has designed the new Korrvu® INTERCEPT™ packaging. The unique corrosion prevention of INTERCEPT Technology™ combined with Korrvu® is a translucent film which enables your package to serve as both a protective shipper and an effective display merchandiser.

South Africa

INTERCEPT Technology™ Group helps in energy supply

South Africa is the biggest consumer of electricity on the African continent. ESKOM South Africa is the main energy supplier in the country, producing about 95% of the country's electricity domestically (as well as extra for export).

The INTERCEPT Technology™ has assisted in South Africa's commitment to being an independent and reliable source of energy. In the production of energy, it is important to have spare parts for energy-producing machinery. That way you can quickly fix generators without forcing cities, hospitals and citizens to live without electricity. It is not only important to have critical spares but it is important to keep them in pristine condition.

INTERCEPT Technology™ is used to prevent corrosion and degradation. Rhino Plastics, the local qualified partner of INTERCEPT Technology™ in Africa, was approached by ESKOM to provide a long-term storage solution for some of their turbines. This was no small task. The pictures show the size of the turbines but they fail to show how much surface area there is on the individual rotors. Additionally, one of the requirements on this storage is that the pieces need to be stored for up to 10 or more years.

Americas

Thermoformed Liners

INTERCEPT Technology™, American product development team partnered up with Intercept Japan and showcased their recent development at the FachPack 2012 September show: INTERCEPT® PP thermoformed liners for

standard injection molded totes, as in the picture. This has been tested by a leading Japanese automotive company and implemented for over 6 months with no corrosion on parts.

Using unique designs as well as one sided INTERCEPT™ sheet extrusions, they have been able to make impacts in numerous large automotive suppliers and OEMs in Japan, helping them move from non-recyclable one time packaging to re-usable, oil free, environmentally friendly totes and trays.

Asia Pacific

INTERCEPT® active in the gas industry

Intercept Korea® partner Coens Energy will be exhibiting Intercept at the 1st Offshore Korea exhibition which will be held in Busan 14 - 16 November 2012. Busan is the offshore and shipbuilding city of Korea. The exhibition is sponsored by the 4 largest shipbuilding

companies (Hyundai, Samsung, Daewoo, and STX). Korea is currently leading the world's offshore development and is the world's largest shipbuilding nation with a global market share of 37.45% in 2011. Intercept Korea with its partner Coens Energy, have been providing Oil & Gas Support Solutions since 1999, together will showcase the benefits and application of Intercept Technology™ in this global industry.

Australia

Intercept Tough Bags

Intercept Australia® has been developing a new range of bags to serve the needs and requirements of the resources industry. The woven base allows for heavy objects to be placed directly onto pallets for long or short term storage. Intercept allows for inspection and reusability without losing the corrosion protection. Intercept has no handling issues, is classed non hazardous and is oil free.

Philippines

INTERCEPT® supports Philippine charity events

INTERCEPT Technology™ provided the Barretto Blues rugby team, fronted by Murray Domb (Muzza), sponsorship to participate in the Pot Bellied Pigs RFC annual Fat Boys Tens Charity Rugby Tournament at the end of August (Aug 31-Sept 2).

The Fat Boy Tens Rugby Tournament takes place in Angeles City in the Philippines and counts with 16 teams and 250+ rugby players from around Asia Pacific including a large contingent from Hong Kong/China. The success stories are starting to show after a number of years. The event has already risen over USD \$250,000 for local charities including the Bahay Bata Centre for Street Children, the Duyan Ni Maria orphanage and the PRFU Development Fund. Only last year the tournament raised USD \$50,000.

For this year the target is raising much needed funds for a number of important initiatives including:

- 1) The Clark Rugby Club with street children from the Bahay Centre.
- 2) Conducting a feeding/vitamins program with 300 children from the local district at the Charity Rugby Tournament in September
- 3) Helping to support a number of important medical missions covering much needed medicines and vaccinations for hundreds of children.
- 4) Other grass-root sports development programs in the Philippines.

To help support such an important project, this year's charity tournament welcomed sports personalities including international rugby legends John Bentley and Doddie Weir. Both of whom played in the tournament and spoke at the Charity Dinner.

New Revolutionary Intercept Mineral Preservation System

IMPS is a new quick and easy packaging system that prevents oxidation of metallurgic samples and preserves drilling cores.

Take advantage

- Core and Sample Preservation
- Original conditions through direct sample processing
- Simplified packaging process
- No refrigeration required
- Location-independent
- Access to Intercept service and maintenance team
